Nuclearing acetylcholine receptor M2, glandular - pig
NyAlternate names: muscarinic acetylcholine receptor III
C;Species: Sus scrofa domestica (domestic pig)
C;Date: 30-Sep-1989 #sequence_revision 30-Sep-1989 #text_change 18-Feb-2000
C;Accession: S0114
FBBS Lett. 235, 257-261, 1988
A,Title: Primary structure of porcine muscarinic acetylcholine receptor III and antagonis A;Accession: S01114
A;Molecule type: DNA
A;Accession: S01114
A;Molecule type: DNA

155UE SPECIFICITY: Expressed predominantly in the CNS, with the greatest expression in the thalamus and caudate nucleus. The various isoforms are mainly coexpressed in brain, but their relative expression level varies in a region-specific manner. Isoforms 3 and 7 are highly expressed in the thalamus, caudate nucleus and cerebellum while isoforms 5 and 6 show a poor expression. Isoforms 5 and 6 show a high expression in the anygdala, substantia nigra, cerebral cortex and hypothalamus. Isoform 7 is not found in hypothalamus or substantia nigra. Isoform 7 is not found in hypothalamus or substantia nigra. Isoform 7 is not found in hypothalamus or substantia nigra. Imms. Isoform 7 is not found in hypothalamus or substantia nigra. Incorpin, bladder and bowel incontinence, anhidrosis, iris atrophy, amyotrophy, ataxia, rigidity and tremor. Insoforms 1 bladder and bowel incontinence, and tripolidine. Shows modest affinity to thioperamide, imetit, N-alpha-methylhistamine and R(-)-alpha-methylhistamine. Isoform 4 is unable to bind to indoproxyfan while isoforms 1 and 3 bind it with high affinity.

--- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright.   FUNCTION: The H3 subclass of histamine receptors could mediate the
                    histamine signals in CNS and peripheral nervous system. Signals through the inhibition of adenylate cyclase and displays high constitutive activity (spontaneous activity in the absence of agonist). Agonist stimulation of isoform 3 niether modified adenylate cyclase activity nor induced intracellular calcium
                                                                                                                                                   SUBCELLULAR LOCATION: Integral membrane protein. ALTERNATIVE PRODUCTS:

Isold=09J135-2; Sequence=VSP_01880;
TISSUE SPECIFICITY: Expressed widely and abundantly throughout the prish. Highly expressed in discrete neuronal populations such as pyramidal cells in cerebral cortex or cerebellar Purkinje cells.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                               Cavia porcellus (Guinea pig).

                                                                                                                              Isola-090XN8-4; Sequence-VSP 001888, VSP 001889; TISSUE SPECIFICITY: Expressed abundantly in brain, most notably throughout the Thalamus, the ventromedial hypothalamus and the caudate nucleus. Isoform 1 is largely predominant in all tissues. MISCELLANEOUS: Proxyfan acts as a potent neutral antagonist while thioperamide, ciproxifan and FUB465 act as potent inverse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                     TISSUE SPECIFICITY.

Submitted (UUL-2001) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: The H3 subclass of histamine receptors could mediate the histamine signals in CNS and peripheral nervous system. Signals through the inhibition of adenylate cyclase and displays high constitutive activity (spontaneous activity in the absence of agonist) (By similarity).

Whaterional analysis of third cytoplasmic loop domains in G-protein
coupling of the HMI muscarinic receptor.";
Biochem. Biochem. 188:1111-1115 (1992)
-!- FUNCTION: The muscarinic acetylcholine receptor mediates various
cellular responses, including inhibition of adenylate cyclase,
breakdown of phosphoinositides and modulation of potassium
channels through the action of G proteins. Primary transducing
effect is PI turnover.
                                                                                                                              MEDINE=88096607; PubMed=3697105;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FUNCTION: The muscarinic acetylcholine receptor mediates various cellular responses, including inhibition of ademylate cyclase, breakdown of phosphoinositides and modulation of potassium channels through the action of G proteins. Primary transducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and functional characterization of a Caenorhabditis elegans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     effect is PI turnover.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ACM3_CAEEL STANDARD, PRT, 585 AA.
